

Sycor.MobiDel

The Web application for your logistics processes.

With *Sycor.MobiDel* – the Web-based link between SAP and your employees – you can optimize your internal logistics processes, minimize errors and accelerate your business processes.

In today's businesses, logistics processes are becoming more and more complex, not least because of the growing requirements of your customers. Very often, information is still recorded manually by your workers and entered in your SAP system later. The result is a redundant manual workload; a slowdown in your business processes due to delays in data entry, not to mention a greater potential for error.

With *Sycor.MobiDel*, we provide you with a solution that optimizes the flow of information in SAP for your logistics processes online. With this Web-based application, employees can easily enter and process data at its original location using mobile handheld scanners. With no SAP-GUI and simple, optimized entry screens and mobile barcode scanners, we reduce the

Your challenges:

- Increasingly complex logistics processes
- Dramatic increase in data volumes
- Huge manual entry workload
- Reduction of order lead times
- Online entry in the SAP system
- Slowdown in processes
- Rapid training of new production and warehouse employees

manual workload for your employees, accelerate your processes and eliminate the sources of errors in manual data entry. In designing the solution, we placed special emphasis on providing an intuitive user interface.

Sycor.MobiDel supports the goods receipt process with or without purchase orders, the entire flow of goods in warehouse management, including stock placement/stock removal and all types of transfers. Our solution also ensures efficient process configuration in inventory management (consumption posting, inventory, bin status report) and the production process (provisioning of components, production order confirmations).

Last but not least, *Sycor.MobiDel* offers convenient functions for shipping, including picking, packing of shipping units and creation of transport units. The integrated loading monitoring function eliminates the risk of incorrect deliveries to your customers and this boosts customer satisfaction.

The *Sycor.MobiDel* solution is aimed at all types of production enterprises and their sales and distribution centers. The functional depth of the solution can be customized and upgraded according to your individual needs.

Your advantages:

- Optimized and accelerated business processes
- Simple menu and interface design
- No (data) redundancies thanks to a high level of integration
- Errors are minimized because the need for manual entries is eliminated
- Intuitive and easy to use thanks to a Web browser
- Open, freely configurable interface
- Paperless processes
