

## The fully integrated SAP solution for medium-sized manufacturers of products with variants.

As a medium-sized business in the variant manufacturing industry, you can map your entire value-added chain with *Sycor.Variants*, our fully integrated SAP industry solution. You profit from preconfigured key processes of your industry and flexible support for your day-to-day business at the same time.

As a manufacturer of high-quality products in the variant manufacturing sector, you are exposed to intense competitive pressure. At the same time, increasingly complex requirements, customer-specific modifications and high expectations with regard to the quality of your products are forcing you to maintain a high level of flexibility. Close integration with the logistics processes of your business partners requires a high degree of organizational and technical expertise. The changing requirements of customers are constantly placing new demands on your business.

With *Sycor.Variants*, the industry solution for the variant manufacturing industry, you will be perfectly equipped for these challenges and prepared for the future. As a compact SAP solution for medium-sized business,

*Sycor.Variants* maps all your processes, from procurement and customer-specific development right through to complex supplier processes. The solution also allows you to maintain a clear overview of your business at all times thanks to freely customizable reports as well as integrated financial accounting and controlling functions.

With this full-fledged ERP system, you can coordinate your logistics process across all departments and reliably plan and control your production processes. The variant configuration feature is a perfect solution for the demanding requirements of varied product alternatives. Using product features and dependencies, all variants of a product with a material number can be processed. The system enables end-to-end mapping of variant configuration, from order entry and production right through to cost accounting.

*Sycor.Variants* offers unique features for complex production planning and control. Your day-to-day challenges include minimizing lead times and adhering to deadlines while optimizing capacity utilization, preproduction costs and the inventory situation. *Sycor.Variants* lets you map these requirements as well as plan and control production processes.

### Your advantages:

- Excellent security of investment
- Short implementation phase
- Efficient and transparent workflows
- Flexible and scalable solution
- High-quality mission-critical KPIs
- Customized and intuitive user interface
- Practice-oriented training concepts

### Your challenges:

- Wide range of product variants
- Increasing quality requirements and documentation
- Innovative production processes
- High level of flexibility and transparency in logistics processes
- Rising pressure to lower costs and innovate

## Place your trust in business software that is easy to implement, flexible and tailored to your company.

The *Sycor.ProductionCockpit* is a central, easy-to-use tool with comprehensive functions for work schedulers and production planners. It offers characteristics-dependent sequence planning, campaign planning, capacity overviews and alert functions. The solution also features an intuitive user interface that can be customized to meet the user's needs. At a single glance, your employees can view the production status and plan campaigns as well as sequences more quickly while maintaining direct access to the customer order or the stock/requirements situation. The integrated shop floor control feature provides a central means of determining the status of current production processes. This way, your employees can quickly adjust plans as needed. Additional maintenance functions ensure high availability of your technical installations.

*Sycor.Variants* offers practice-oriented sales and shipping processes for smooth order processing. Comprehensive functions for cross-system exchange of data via electronic data interchange

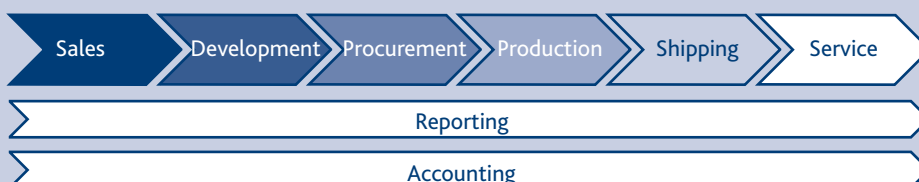

(EDI) are available. Developed by Sycor, the *Sycor.OrderCockpit* facilitates the creation of quotations, orders and invoices. A traffic light feature allows you to view the delivery status of all orders at a glance and perform a variety of actions, such as initiating deliveries or triggering invoices, without changing screens. We also offer custom solutions for mobile data entry (*Sycor.MobiDel*) that can further optimize your internal logistics processes. We can also implement custom features such as scheduling agreements with VDA-compliant (VDA = German Association of the Automotive Industry) forecast and JIT delivery schedules via EDI, packaging-based logistics and production facility integration.

The SAP solution is a safe investment, can be implemented quickly and is ideal for international use. With just the press of a button, you have access to key company data as the basis for sound decisions.

Sycor is your partner for SAP implementation: We have been providing services to mid-sized variant manufacturers for years and have solid process expertise as well as strong references. With a staff of more than 200 in Germany, we can also advise you in any other IT-related areas, such as data center services or document management.

### Supports the following business processes and software functions:

- Reduce your product variety through variant configuration
- Standard integration of CAD systems
- Quality management across all process steps
- Efficient purchasing, sales and risk management
- Transparent overview of all inventories and variants
- EDI functionalities in logistics processes
- *Sycor.OrderCockpit* and *Sycor.ProductionCockpit*
- Comprehensive planning and MRP procedures
- Document management for internal and external documents
- Comprehensive costing functions enable continuous cost controlling
- G/L accounting, accounts payable and receivable accounting, asset accounting
- Freely customizable, real-time business reports

### Business advantages:

- Transparent view of all key performance indicators
- Preconfigured industry-specific processes ensure a high level of planning and process reliability
- Lean, automated processes ensure shorter lead times and faster rollouts
