

Scheduling

Scheduling

DispoControl is an easy to use planning tool for the efficient scheduling of machines, equipment, accessories and personnel. In real-time and across locations. Inform your customers quickly and supply them tailored to their needs.

Customers expect fast and reliable information on when and where they can obtain the required machines, equipment, accessories, and operating personnel. Providing your customers with the rental assets they need, with the required equipment and the right accessories, is a matter of course for you. And so is a timely delivery. At the same time, you have to meet service and maintenance requirements to assure high availability of your fleet. You want to ensure optimum capacity utilization for your fleet, and to avoid third party rentals and 'large

for small'. With the DispoControl, we offer an easy to use planning tool for efficient scheduling which ensures high availability of information and a precise overview, and optimizes fleet utilization and availability.

DispoControl at several workstations and across locations, with a convincing graphical representation of the processes and comprehensive access to all relevant data in real time, ensures an effective workflow with short processing times. The strengths of our solutions fully come to bear in scheduling with DispoControl: as a fully integrated system with central data administration, scheduling is perfectly linked and synchronized in real time with all relevant processes – e.g. quotations, orders, returns and workshop orders.

The implementation of scheduling processes focuses on your employees: to simplify their work, the graphical user interface clearly displays a variety of information. DispoControl also features easy to use filter functions. The user interface shows the availability of equipment and machines, including the assigned accessories and employees, as well as

planned service dates. With a few clicks quotations and bookings can be posted, and machines and vehicles can be combined with the equipment and the accessories needed very quickly. Using the DispoControl, you can permanently assign the required equipment to rental assets and combine them with special accessories or accessory packages for a specific project.

On the corresponding scheduling bar, clear symbols also show whether there has been an availability report or rental cancellation, if specific delivery times have been entered for an order

or whether attendants, setup personnel, permits or traffic management are required. The mouseover function provides additional information in real time on the various schedule types and the symbols on the scheduling bar, for example times or time periods for delivery to the customer. For every rental order, it is also possible to tell at a glance to what extent it has already been invoiced. Each scheduler can individually configure what information is displayed.

The filter functions also speed up workflows in scheduling. It is possible to filter by employees, assigned permanent staff or required qualifications. The filter "Available on construction site" displays rental assets for which an availability report has been submitted but which have not been returned. This allows trip planning to be optimized and transport distances to be reduced.

DispoControl – your advantages:

- Scheduling machines, equipment, accessories and operating personnel
- Service and maintenance scheduling fully integrated
- Scheduling across multiple workstations and locations
- Fast and reliable information for customers
- Faster processes
- All information at a glance in real-time
- Clear symbols for the availability report, rental cancellation, delivery times, required attendants, setup personnel, permits or traffic management
- Mouseover function to access additional data
- Easy to use filter function
- Individual setup of the user interface
- Functions to optimize trip planning and reduce transportation distances
